

Amendments to the claims

1-16. (canceled)

17. (previously presented) A method comprising:

- (a) providing a plurality of documents accessible through an HTTP server, wherein at least one document includes data corresponding to operating data, wherein the operating data is adapted to control operation of at least one transaction function device of an automated transaction machine;
- (b) accessing the at least one document through the HTTP server with an automated transaction machine, wherein the automated transaction machine includes a browser, wherein the at least one document is accessed with the browser;
- (c) loading data corresponding to the operating data in a memory of the automated transaction machine; and
- (d) operating the at least one transaction function device of the automated transaction machine responsive to the operating data.

18. (previously presented) The method according to claim 17, wherein in step (d) the at least one transaction function device includes a cash dispenser and the operating data includes an applet, wherein step (d) further includes dispensing cash from the cash dispenser responsive to the applet.

19. (previously presented) The method according to claim 17, and prior to step (d) further comprising:

- (e) accessing an applet with the automated transaction machine responsive to the operating data; and

wherein step (d) includes operating the at least one transaction function device responsive to the applet.

20. (previously presented) The method according to claim 19, wherein the at least one transaction function device includes a cash dispenser.

21. (new) A method comprising:

- (a) providing a plurality of HTTP records accessible through an HTTP server,

wherein the plurality of records include a plurality of HTML documents,

wherein at least one document includes record data corresponding to
operating data operative to control operation of an automated transaction
machine;

- (b) accessing the record data through the server with a computer in an automated
transaction machine, including accessing a document with a browser operating in
the computer of the automated transaction machine, wherein the document
includes instructions; and
- (c) loading the operating data in memory of the automated transaction machine
responsive to the instructions.

22. (new) A system comprising:

an HTTP server,

a plurality of records accessible through the server,

wherein at least one record includes machine operating data,

wherein a second record includes further machine operating data,

an automated transaction machine,

wherein the automated transaction machine includes a computer,

wherein the computer includes memory,

wherein the automated transaction machine includes at least one transaction function device in operative connection with the computer,

wherein the at least one transaction function device is changeable from a first condition to a second condition,

software executable in the computer,

wherein the software is operative to cause the computer to access the at least one record and to store data corresponding to the machine operating data in the memory,

wherein the software is further operative to cause the computer to access the second record and to store data corresponding to the further machine operating data in the memory responsive to a change in condition of the at least one transaction function device.

23. (new) The system according to claim 22

wherein the software includes a browser,

wherein the at least one transaction function device includes a sheet dispenser,

wherein the plurality of records accessible through the HTTP server include at

least one document, wherein the at least one document includes transaction

machine operating instructions to operate the sheet dispenser,

wherein the software is further operative to cause the computer to access the at

least one document with the browser and to cause operation of the sheet dispenser
